

ENVIRONMENT & INNOVATION

SEMESTER ABROAD

WINTER SEMESTER ABROAD

Join us for a semester abroad program in Environmental Studies, located within the faculty of Environmental and Civil Engineering. We offer a new set of courses for international students majoring in Environmental Studies, who are focused primarily on the domains of air, water, and earth.

Turn your designs into plans. Put your plans into action.

It's time to make an impact. Change the way your family, your friends, and your community move, build, conserve and consume. With population growth, urbanization growth, and a growing environmental awareness, there is important work to be done and creative solutions to be developed.

Topics include those related to design and management solutions in response to water and environmental issues: water delivery and supply systems; effects of trace pollutants in air, soil, and water bodies; water and wastewater treatment; recycling of treated wastewater for use in agricultural irrigation.

COURSES

- > Fundamentals of Water and Wastewater Treatment
- > Laboratory on Water and Wastewater Treatment
- > Environmental Fate of Anthropogenic Pollutants*

**This course requires a prerequisite.*

CANDIDATES

This program is intended for advanced undergraduate students (3rd or 4th year) who are majoring in Environmental Engineering or Environmental Science, as well as master's students.

ADMISSIONS REQUIREMENTS

- > Students must have a 3.0 GPA or an 80% average.
- > Additional elective courses are available.
- > For more information, visit our website at: <https://int.technion.ac.il>

Winter Semester

Academic Term:
October – February

Tuition:

\$9,000 / semester

** Tuition does not include: housing fees, health insurance, campus fees, living expenses, or airfare. ** Tuition is waived when the home and host university have an active partnership.*
